

Samsung SL-65A for Industrial & General Manufacturing

Large-envelope CNC lathe with steady-rest support for precision turning of long, heavy structural round parts. This paper covers what the machine does, the industrial & general manufacturing parts we produce with it, the alloys we run, the tolerances and finishes industrial & general manufacturing buyers expect, and the documentation package.

Big Thicket Express · 22" OD × 119" L max turning (with steady rest) · large-envelope heavy-duty CNC lathe with steady rest

Executive summary

Machine: Samsung SL-65A/3200 (shop nickname: *Big Thicket Express*). large-envelope heavy-duty CNC lathe with steady rest at B&R Productions, running from our New Waverly, Texas shop under an ISO 9001:2015 quality system.

Application: Large-envelope CNC lathe with steady-rest support for precision turning of long, heavy structural round parts for Industrial & General Manufacturing customers — Industrial equipment OEMs, custom machinery builders, pump and valve manufacturers outside oilfield, food and pharma equipment suppliers, mining and heavy-equipment operators, reverse-engineering customers, sustainment for out-of-production industrial equipment.

Envelope: 22" OD × 119" L max turning (with steady rest). **Tolerance:** ±0.0005" routine on critical features.

Traceability: Material by heat and lot on every job.

The machine, in context

This is the heaviest machine on the floor. When a customer sends a 20-inch forged blank and wants it turned to a finished OD with concentric internal features across ten feet of length, Big Thicket Express is the answer. The included steady rest is what makes long slender work possible — without it, deflection eats your tolerance.

Full spec table

Model	Samsung SL-65A/3200 ("Big Thicket Express")
Type	Large-envelope heavy-duty CNC turning center — Samsung SL-65A platform
Max turning capacity	22" OD × 119" L (B&R working spec, with steady rest)
Platform max swing	40.5" over bed
Platform max turning length	126" (3,200 mm) between centers
Chuck	24" hydraulic 3-jaw
Steady rest	Included — supports long slender work to hold straightness
Main motor	60 HP high-torque
Rigidity	Samsung SL-65 platform — heavy cast base for the largest oilfield turning work
Tolerance capability	±0.0005" routine on critical features; straightness held with steady-rest
Materials	Full range — forgings, bar stock, tubing in oilfield and structural alloys

Who this serves in Industrial & General Manufacturing

Typical buyer: Industrial equipment OEMs, custom machinery builders, pump and valve manufacturers outside oilfield, food and pharma equipment suppliers, mining and heavy-equipment operators, reverse-engineering customers, sustainment for out-of-production industrial equipment.

What's hard about industrial & general manufacturing work: Legacy parts with no OEM support, one-off replacement components, small-lot production runs, materials that don't fit standard shop capabilities, and tight lead times on repair work where a down-machine is losing money by the day.

Typical Industrial & General Manufacturing parts we produce on Big Thicket Express

- Largest-diameter industrial turned work
- Long industrial drive shafts and spindles
- Large pump bodies and industrial cylinders
- Heavy industrial structural components
- Extended rods with steady-rest support

Above list is representative; if your part isn't shown, call and ask — most oilfield / aerospace / defense / industrial turned or milled work fits somewhere in the shop.

Alloys we run for Industrial & General Manufacturing

Standard range: Stainless (304, 316, 17-4 PH) · Tool steels · 4140 / 4340 · Brass · Bronze · Aluminum · Cast iron · Specialty alloys per customer requirement.

Industrial work covers the widest alloy range because the applications are the widest. Food and pharma often specify 316L or 17-4 PH; mining and heavy equipment specify tool steels and 4140/4340; pump manufacturers outside oilfield use everything from bronze bushings to stainless impellers. We work with the customer's spec sheet — if you tell us the alloy, we'll tell you honestly whether we can machine it and how quickly.

What "we run these weekly" means: we stock or reliably source the common alloys in the industry's typical spec range. Sharp tooling, proven feeds and speeds, and process control specific to each alloy family. Your part is not the one we're experimenting on.

Tolerance and finish expectations in Industrial & General Manufacturing

±0.0005" routine on critical features. Industrial applications range from precision (pump seal areas, close-fit bushings) to structural (mining and heavy-equipment brackets); we adjust the inspection plan to what the part actually needs. Surface finish measured on parts where finish drives function.

Documentation and quality workflow

Documentation calibrated to customer requirement. Material traceability standard for critical parts. Certificates of conformance issued with delivery. NDAs on request for proprietary designs or reverse-engineered legacy parts.

Response time and emergency work

Down-machine and production-critical work prioritized. Lead times honestly quoted — no false promises. For legacy reverse-engineering, we typically confirm feasibility on the first phone call. Call (936) 291-7827.

How we compare

Compared to sourcing a new OEM part: we're often faster and cheaper for one-offs and small runs, and for legacy parts where the OEM has moved on we're often the only realistic option. Compared to a cheapest-bidder job shop: we hold tolerance, document material, and don't ruin the part.

Working with B&R Productions

New customer or existing, the process starts the same way: call (936) 291-7827 or send a print through the quote form. Prints are accepted as PDF, STEP, IGES, DWG, or DXF; if you only have a sample part, we reverse-engineer routinely. NDAs on request. ITAR-controlled prints handled under document control with prints staying in-shop.

Quotes typically come back within 24 hours for standard work, same-day for repeat customers on stocked materials, and near-immediately by phone for emergency and rig-down situations. Lead times are quoted honestly — we don't promise Wednesday and deliver next month.

Ready to talk about your Industrial & General Manufacturing work?

Send us a print or a sample photo and specs. Emergencies: call direct and say "rig-down."
